Increases in the indices correspond to deterioration in the relative competitiveness of Tonga's producers. The real effective exchange rate averages the real bilateral rates for Tonga's major trading partners, as measured by the sum of imports and exports. The nominal effective exchange rate simply averages the movement of the pa'anga against the currencies of Tonga's major trading partners. The methodology for calculating these rates, including the full history of data, was updated in March 2015. Some of these data may differ to the last Quarterly Bulletin due to revision of the data.
